Extend Your Investment

Factory Quality

Don't settle for just any regrind. At Guhring, your tools are reconditioned in Guhring owned and operated facilities, not a facility that is an "authorized" shop like most manufacturers advertise. Don't be fooled by manufacturers who don't operate their own reconditioning facilities. You can trust Guhring.

In-House Coatings

Guhring reconditioning centers are equipped with state-of-the-art PVD coating chambers. This ensures that your reconditioned tools are properly cleaned before coating and have the highest quality coating re-applied after grinding. Your tools also receive the original Guhring proprietary coatings like FIREX®, nano-A™, nano-SI™, Super-A™ and MolyGlide® and not a knock-off coating. Not all PVD coatings are the same.

Repeatability and Traceability

Guhring reconditions your tools on Guhring designed and built CNC grinders similar to the machines that made your new tools. All Guhring reconditioned tools are marked with a unique and traceable job number and inspected for defects prior to reconditioning for absolute quality control. Any tools that are beyond their service life are returned to the customer when requested.

Precision Honing Process

Applying the correct hone, and controlling the size of that hone on a high performance drill, is imperative if tool performance is to remain constant. Guhring has stringent process and quality control on applying hones to high performance carbide drills which ensure repeatable results today and three months from today. You may be surprised how your current reconditioning source applies their hones, if at all!

Handle With Care

Guhring understands that you spend good money on your carbide drills and end mills so we provide protective plastic tote boxes for shipping your valuable tools to-and-from Guhring. Enquire about receiving a free shipping tote for your next order.

Quotations Available On-Line

Receive a quotation, along with a packing slip for your tools, on-line. Visit: <http://www.guhring.com/ProductsServices/ToolReconditioning/> Order size affects your price and you can use the on-line pricer to determine your most economical lot size for shipment to Guhring. You can also request shipping totes along with your order.

Pick-up Service Available

In certain geographical areas, Guhring offers pick-up and delivery service for reconditioning. With four reconditioning centers located across the USA, you may work in an area that is serviced by our delivery vans. If you aren't serviced by our van route, you can ship your tools via UPS which in most cases will be overnight at ground rates. Enquire about our van service today. Restrictions apply.

Organize Your Tooling Consumption

If you are looking for a way to better control your new tool consumption versus refurbished tool usage, Guhring has a vending machine solution that may be of interest. Guhring Tool Management Systems can be tailored to dispense reconditioned tools before new tools. They can also be used to monitor tool consumption and reconditioning cycles. Contact Guhring or your local authorized Guhring distributor for more information about Guhring's Tool Management Systems.

Not Just Guhring Tools

Guhring can recondition any manufacturers' carbide drills and end mills. You can request to have the original manufacturers' point on your reconditioned tools or you can request a more economical Guhring point grind. We are happy to serve all your carbide drill and carbide end mill reconditioning needs.
